No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Description

Activation and analysis of cryptic crt genes for carotenoid
biosynthesis from Streptomyces griseus.";
Mol. Genet. 252:658-66(1996).
-!- FUNCTION: This enzyme converts phytoene into zeta-carotene via the
intermediary of phytofluene by the symmetrical introduction of two
double bonds at the C-11 and C-11' positions of phytoene.
                                                                                                                                                                                                                                                                -------TDRTWPNLAHHTISFGAAWKSTFHBLTRTGBLMSDPSLLITRP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Schmidhauser T.J., Lauter F.-R., Russo V.E.A., Yanofsky C.;
Clohing, sequence, and photoregulation of al-1, a carotenoid
biosynthetic gene of Neurospora crassa.";
Mol. Cell. Biol. 10:5064-5070(1990).
-!- FUNCTION: This enzyme converts phytoene into zeta-carotene via
intermediary of phytofluene by the symmetrical introduction of
double bonds at the C-11 and C-11' positions of phytoene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Bukaryota, Fungi, Ascomycota, Pezizomycotina, Sordariomycetes;

"DNA sequence analysis of the photosynthesis region of Rhodobacter sphaeroides 2.4.1.";

Nucleic Acids Res. 28:862-867(2000).

-!- FUNCTION: This enzyme converts phytoene into zeta-carotene via intermediary of phytofluene by the symmetrical introduction of double bonds at the C-11 and C-11' positions of phytoene.

-!- CORACTOR: FAD (Probable).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SEQUENCE FROM N.A.

Connerved enzymes mediate the early reactions of carotenoid
biosynthesis in nonphotosynthetic and photosynthetic prokaryotes.";
Proc. Natl. Acad. Sci. U.S.A. 87:9975-9979(1990).
-!- FUNCTION: This enzyme converts phytoene into lycopene via the intermediaries of phytofluene, zeta-carotene and neurosporene by the introduction of four double bonds.
-!- CORACTOR: FAD [Probable].
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Bacteria; Proteobacteria; Gammaproteobacteria; Enterobacteriales;
